Title: Friendly Reminder

Description: An application where user can manage their relationships with friends/family/acquaintances and get reminders to reach out to/check in (via call/text) with the people that are most important to them. Frequency of a reminder for a particular contact is based on strength of the user's relationship with that contact.

Actors: "remindee" – person that manages/receives reminders (the user)

Functionality:

1. Remindee can sign up
2. Remindee can log in
3. Remindee can add a new contact
4. Remindee can delete a contact
5. Remindee can set the relative importance of a contact
6. Remindee can update the relative importance of a contact
7. Remindee can add contacts to groups
8. Remindee can bulk update the relative importance of contacts in a group
9. Remindee can log interactions (calls/texts) they had with a contact
10. Remindee can view a schedule/ordered to-do list of the contacts they need to reach out to next
11. Remindee can update to-do list when they reach out to a contact

Stretch Functionality:

12. Remindee receives emailed reminders to reach out to a contact
13. Remindee can view a visualization (calendar) of contact events (when they last reached out to various people in their managed contacts)
